<value , clarity & productivity>

01

Prettier

The screenshot shows the Visual Studio Code marketplace page for the 'Prettier - Code formatter' extension. The header includes the extension name, a link to prettier.io, download count (63,877,086), star rating (485), and a 'Sponsor' badge. Below the header are buttons for 'Disable', 'Uninstall', and 'Auto Update'. The main content area is titled 'Prettier Formatter for Visual Studio Code' and describes it as an opinionated code formatter. It lists supported languages: JavaScript, TypeScript, Flow, JSX, JSON, CSS, SCSS, Less, HTML, Vue, Angular, HANDLEBARS, Ember, Glimmer, GraphQL, Markdown, and YAML. A sidebar on the right shows 'Installation' details (Identifier: esbenp.prettier-vscode, Version: 11.0.2, Last Updated: 2 weeks ago, Size: 9.55MB) and 'Marketplace' information (Published: 8 years ago, Last Released: 2 weeks ago).

Prettier Formatter for Visual Studio Code

Prettier is an opinionated code formatter. It enforces a consistent style by parsing your code and re-printing it with its own rules that take the maximum line length into account, wrapping code when necessary.

JavaScript · TypeScript · Flow · JSX · JSON
CSS · SCSS · Less
HTML · Vue · Angular · HANDLEBARS · Ember · Glimmer
GraphQL · Markdown · YAML
Your favorite language?

Installation

Identifier	esbenp.prettier-vscode
Version	11.0.2
Last Updated	2 weeks ago
Size	9.55MB

Marketplace

Published	8 years ago
Last Released	2 weeks ago

Prettier is an opinionated code formatter that automatically formats your code every time you save. It enforces consistent styling across your entire project, regardless of who wrote the code.

This eliminates formatting debates, reduces code review time, and lets you focus on logic instead of indentation, spacing, or semicolons.

Best for: Clean code, team projects, frontend and backend development.

02

Live Server

The screenshot shows the Live Server extension page in VS Code. At the top, there's a purple icon of a signal tower. The title 'Live Server' is followed by the author 'Ritwick Dey', a download count of 72,328,806, and a star rating of 5 stars (512 reviews). Below this, it says 'Launch a development local Server with live reload feature for static & dynamic pages'. There are buttons for 'Disable', 'Uninstall', and 'Auto Update' (which is checked). A tab bar shows 'DETAILS', 'FEATURES', and 'CHANGELOG'. The 'DETAILS' tab is active, showing a link to 'LIVE SERVER++ (BETA)' and a description of the extension. On the right, there's an 'Installation' section with a table of metadata: Identifier (ritwickdey.liveserver), Version (5.7.9), Last Updated (2 months ago), and Size (14.94MB). Below that is a 'Marketplace' section with 'Published' (8 years ago) and 'Last Released' (11 months ago).

Last Released	11 months ago

Live Server launches a local development server and automatically reloads the browser whenever you save a file. This gives instant visual feedback while working with HTML, CSS, and JavaScript. It removes the need to manually refresh pages and significantly speeds up UI development.

Best for: Web development, rapid UI testing, beginners and professionals alike.

03

Google Colab

The Google Colab extension allows you to open and manage Colab notebooks directly from VS Code. It is especially useful for data science, machine learning, and Python experimentation.

You can combine the power of cloud execution with the comfort of your local editor.

Best for: Python, AI/ML workflows, data analysis.

04

Blackbox AI

Blackbox AI is a productivity booster that helps generate code, explain snippets, and autocomplete logic using AI. It is particularly useful when learning new frameworks or debugging unfamiliar code. Used correctly, it saves hours of searching documentation or Stack Overflow.

Best for: Learning, rapid development, debugging, productivity.

05

JellyFish Theme

A clean, visually balanced theme that reduces eye strain during long coding sessions. Good themes are not just about aesthetics they improve readability and focus.

JellyFish Theme offers a smooth color palette that works well in both light and dark environments.

Best for: Long coding hours, better focus, visual comfort.

06

ErrorLens

The screenshot shows the VS Code Marketplace page for the ErrorLens extension. At the top, there's a yellow warning triangle icon. The extension is by Alexander, with 7,788,648 installs and a 4.9/5 rating from 185 reviews. The description states: "Improve highlighting of errors, warnings and other language diagnostics." Below this are buttons for "Disable", "Uninstall", and "Auto Update". The "DETAILS" tab is selected, showing statistics: version (rate limited by upstream service), installs (7.8M), rating (4.9/5 (185)), and OpenVSX Downloads (394k). A description follows: "ErrorLens turbo-charges language diagnostic features by making diagnostics stand out more prominently, highlighting the entire line wherever a diagnostic is generated by the language and also prints the message inline." Below this is a code snippet with a warning icon and a message: "Missing semicolon (semicolon)". The "Marketplace" section on the right shows the identifier "usernamehw.errorlens", version "3.26.0", published "6 years ago", and last released "7 months ago". The "Categories" section shows "Other".

Last Released 7 months ago

Categories
Other

ErrorLens highlights errors, warnings, and diagnostics directly in your code instead of hiding them in the problems tab.

This allows you to spot issues immediately and fix them faster, improving debugging efficiency.

Best for: Debugging, large codebases, real-time error visibility.

07

TODO Highlight

This extension highlights TODO, FIXME, and custom tags directly in your code. It helps track unfinished tasks without switching tools or writing separate notes.

Perfect for managing work-in-progress features.

Best for: Task tracking, project organization, clean workflows.

08

Bookmarks

Bookmarks allow you to mark important lines of code and quickly jump between them.

This is extremely useful when working on large files or complex logic that requires frequent navigation.

Best for: Large projects, code navigation, productivity.

09

Colorize

Colorize visually displays color values directly in your code. Instead of reading hex or RGB values, you instantly see the actual color. This makes UI and CSS work significantly faster and more intuitive.

Best for: CSS, UI/UX design, frontend development.

10

Comment Your Favourite One

Every developer has that one extension they cannot live without. Share your favorite VS Code extension in the comments and help others improve their workflow.
